POS MobilePro II

Top Technology for Professionals

The Vectron POS MobilePro II is an extremely robust and completely waterproof mobile POS system. Solid finishing and modern, sophisticated technology guarantee high working speed and a long, fail-safe service life. Thanks to the practical touch screen-keyboard combination, it can be operated particularly quickly and is especially suitable for companies with a high customer frequency or extreme levels of use at peak times. The system is small, light and ergonomically shaped for comfortable operation. As with all mobile Vectron devices, the Vectron POS MobilePro II is also a fully-fledged POS system independent of a server station.

Leasing as of 59 Euro/month*

Product highlights

- Full-fledged mobile POS system
- Fatigue-free operation thanks to low weight
- Completely water and dust resistant
- Brilliant, sunlight-suitable colour display
- Automatic keyboard and display brightness adjustment
- Fast, powerful processor
- Automatic data transmission when returning from areas without radio communication to transmission zones
- WLAN and Bluetooth as standard
- Optional webcam function and support for transponder readers** and customer account cards
- Micro-SD card slot
- Extensive selection of accessories and peripherals

* Leasing 48 months; minimum leasing volume 3,000 Euro; conditions may differ depending on region. Please contact your local Vectron dealer. / **available April 2014

High-performance mobile POS system

One Vectron POS MobilePro II and one printer already make a stand-alone system, as the POS MobilePro II is a full-fledged mobile system, independent of a server station. Its reliable, powerful processor provides for optimum operating safety. Vectron POS MobilePro II is particularly suitable when being used as network system. Entered order data is transmitted via radio directly to kitchen or counter. This reduces the ways for your service staff and orders are prepared earlier.

Light, robust magnesium housing

The robust magnesium housing is both light and impact-resistant, with the result that the Vectron POS MobilePro II displays outstanding break resistance when dropped.

Water and dust resistant

Its high-class finish means that the POS MobilePro II is completely water-proof, so rain, spilt drinks or even a dive in the sink pose no problem. Liquids and dust do not penetrate the housing.

Automatic display screen rotation

The screen content rotates 180° when the Vectron POS MobilePro II is tilted forwards. This is useful in order to show guests the invoice amount or other information.

Ergonomic design

The housing is light and ergonomic. The keys are designed to ensure safe, easy operation, either manually or with a touch pen.

Wireless printing via Bluetooth

A mobile belt printer or similar device is connected via the standard Bluetooth interface, allowing waiting staff to print out invoices conveniently directly at the table.

Auto-standby and long battery run time

The high-performance Li-Ion batteries guarantee long run times, can be changed in a flash and do not suffer

from memory effect during the recharging process. As soon as the POS MobilePro II is placed in an upright position - e. g. whenever it is in the practical holster - it switches automatically to standby mode. When the battery compartment lid is opened during operation you get an automatic warning.

High quality display

The light, transfective TFT-colour display guarantees best readability even in direct sunlight. The integrated brightness sensor controls keyboard lighting in an optimum manner.

Simple network installation and integration via WLAN

Network connections are created quickly and easily via the WLAN module - and the connection to existing networks is just as simple and cost-effective. WEP and WPA2 are supported. The POS MobilePro II is network-compatible with all other Vectron POS system models thanks to the identical system software.

Useful additional functions

The optional transponder reader enables the use of non-contact and thus low-wear customer or employee account cards. The optionally available webcam function sends livepictures of installed cameras to the POS system and allows keeping an eye on secluded areas.
